

Heavy-duty and fast, the KR 496F handles hard to feed items such as Z-folds and open ended products. Easily mounts onto and integrates with the KR shuttle feeder. Because friction feeders are not suited for feeding many catalogues and books, both types of feed systems are necessary to handle the widest range of products. A separate frame assembly makes feed belt replacement quick and easy. Optional configurations include wide and narrow product feed kits, extended out feed and mounting stand. See the KR 496FC for batch and or staged feeding.

## Key Benefits

- Integrates with KR inkjet bases
- Heavy-duty construction
- Simplified feed belt replacement

The KR 412 allows you to position your KR addressing system **after** your tabber or labeling system. You can also use it to run your addressing system inline with a folder, another inkjet system or most other inline systems.

**Want to personalize Post-It Notes using your KR tabber and addressing system?**

***Tabber belts smearing your addresses?***

**Want to increase productivity by running jobs inline?**

Convert your KR 215 IJ transport into an inline base using the KR 412 Shuttle By-Pass.

The KR 412 installs in minutes over top the KR 215 shuttle similar to the way a friction feeder is installed. The KR 412 carries product up and over the shuttle and delivers it into the feed rollers and vacuum transport of the KR 215.
