## Match Rite Mailing System

The Match-Rite System was designed to be an affordable alternative to “Blind Matching”.

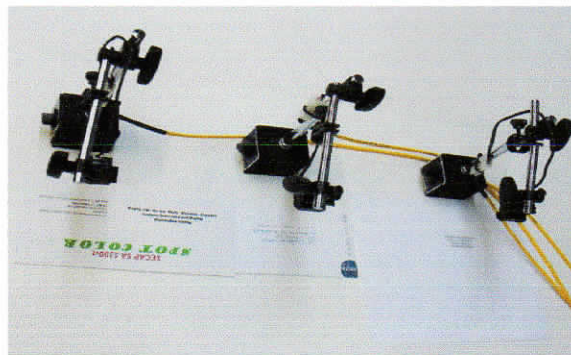

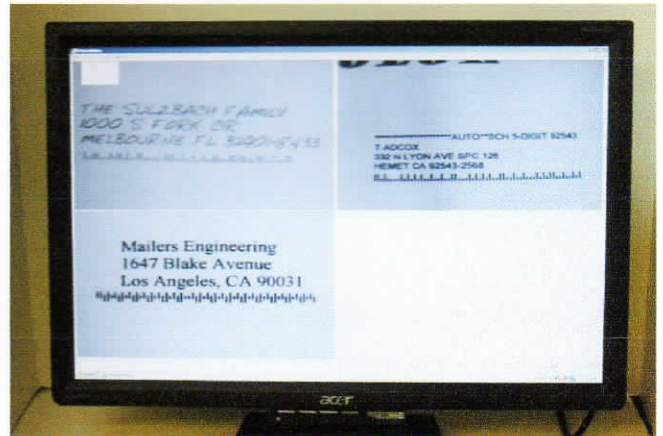

We put close to 25 years of experience in mailing equipment and computer programming to work and develop a matching system that is within reach of small and large mailing operations.

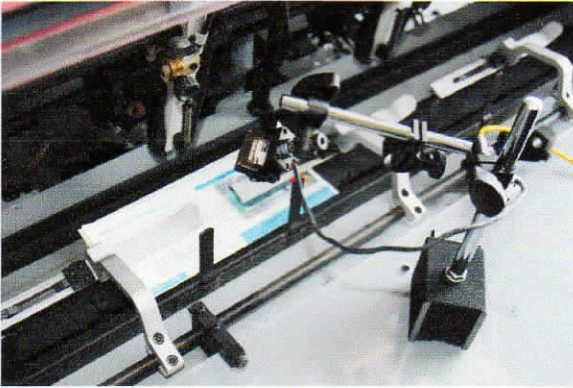

## General Specifications:

Video Match-Rite uses small Cameras to capture the names and address of the pieces to be matched in the operating of an Inserting System.

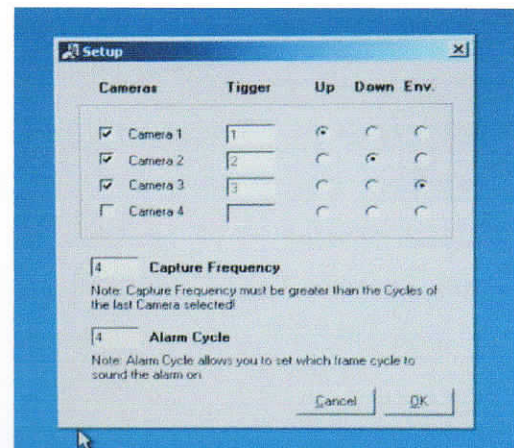

The images are then frozen on the computer monitor for visual inspection by the operator. If a miss-matched is seen, the operator can then stop the inserting system and make correction to avoid having miss-matched mail.

Depending on the job you are running on the inserting system, you can check every other one, or every 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, etc. envelope.

The Match-Rite System runs in the Windows System and has a software that is easy and simple to navigate.

Small cameras have a magnetic mount base so you have unlimited positions in each camera.

A re-designed cam system can be installed at the end or on the back of the inserting machine.
