ELITE 500 TABLETOP FOLDERS

Profold's tabletop folders provide big machine performance at tabletop prices. The product line consists of two vacuum feed and one friction feed model. All have bottom feeding top loading design for continuous use.

SUPER ELITE 500- VACUUM FOLDER

The Super 500 model fold rollers are made of proprietary urethane material that gives the rollers longer life. The main roller is grooved in a manner that forces laser toner and ink to the sides of the rollers thereby reducing roller clean-up time. It also reduces marking on most folded product and allows trapped air caught between the paper and the roller to escape providing a tighter fold. The roller material has a better gripping surface for handling a wide variety of media substrate.

The Super 500 has skewable paper side guides, a Profold first, that are designed to allow skewing of the guides to compensate for variance in the 'squareness' of the paper stack. Skewing the paper side guides to maintain a square fold is much more effective than adjusting the fold plate paper stop. Micro adjusting screws allow adjustments to be made while the folder is running. The Super 500 can feed and fold up to 36,000 sheets per hour in tri-fold or half-fold formats. An electronic counter is standard with the Super 500.

Options Available: Right Angle Folder/Slitter Blades/Stand*

ELITE 500 SERIES VACUUM OR FRICTION FOLDER

Simplified design makes the Elite 500 folders easy to operate. The feed and delivery stations are on the same side for operator comfort and convenience. Set up is quick. The fold stop design and fold chart provided reduce set up time by illustrating exact plate settings for all commonly used folds. Micro adjustments allow precise fold settings to be dialed in after the primary fold settings have been made. The Elite 500 vacuum feed series handles coated stocks and is unaffected by press spray powder. The vacuum model also eliminates ink smudging and allows most product to go directly to the folder on off-set stock.

The Right Angle unit is unique in the fact that folded product is delivered to the top of the unit for easy, stress-free removal. This feature maximizes operator productivity and reduces potential work related injuries.

Options Available: Right Angle Folder/Slitters/Stand*

Elite 500

Specifications

- **Sheet Size:**
Maximum 14" x 20"
Minimum 5" x 5" Vacuum
3" x 4" Friction
- **Power:**
Flexible to meet site requirements
- **Dimensions All Models:**
Length: 23"
Width: 25"
Height: 19"
- **Shipping Weight:**
Elite 500 Fric: 285 lbs.
Elite 500 Vac: 355lbs.
SUPER 500: 355 lbs.
- **Paper Weight:**
Minimum 14 #
Maximum 67# Bristol

Right Angle Folder
