

PF 1000 FEEDER/FOLDER

*Loaded With
Simplicity
And
Productivity*

Solutions.....Not Just Products.

PF 1000

FEEDER/FOLDER

The PF 1000 Feeder/Folder is a unique machine designed to save labor and eliminate the bindery step by folding flat stock and delivering it directly into an inserter gripper arm. The unit easily fits on the inserter hopper table of conventional A-Frame inserters and requires no additional floor space.

The PF 1000 does not require separate operators. Front load design allows one operator to handle both the inserter and folder. The PF 1000 is built in left and right versions so that up to four can be mounted on a six-station inserter.

The PF 1000 allows the inserter to run continuously without stopping for product reload.

Features/Benefits

- Secure high-efficiency transition of product to gripper arm
- Seated bearings for quiet operation
- Patented Grooved "Fast Track" rollers for tighter folds
- Automatic demand feeding monitored by optic sensor
- Capable of letter, single, or Z folds
- The PF 1000 eliminates the need to route product to the bindery thereby reducing the chance of mixing up jobs on the inserter
- Minimum operator intervention required
- Unit is portable and is easily moved from one inserter to another

Application

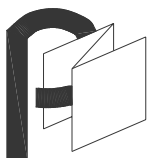

Fold address sheet at the same time it is inserted by going directly from the printer to the inserter.

The primary application for the PF 1000 Feeder/Folder is to streamline the process of inserting folded sheets into an inserter and eliminate the need to fold inserted material at a bindery. This speeds up production and lessens the chance that jobs will be mixed up at the inserting stage.

PF 1000

Specifications

- **Product Size**
Maximum 8½" x 14"
Minimum 6" x 7"
- **Paper Weight**
#16 Bond to #60
Card Stock
- **Speed**
10,500 Sheets/hr.
- **Dimensions**
Width 14"
Length 24"
Height 17"
- **Power**
115 V 60HZ
